

JOHN DEERE

NOTHING RUNS LIKE A DEERE

JOHN DEERE FUEL FILTERS: WATER HAS NO CHANCE

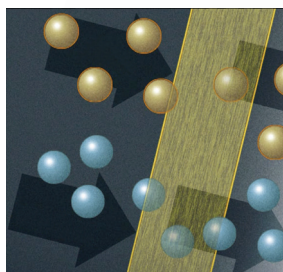

In a fuel system, water is the number one enemy. Its presence leads to poor performance and reliability. That's why John Deere Fuel Filters are specially designed to not only trap water but also repel it.

Optimal fuel flow: designed specifically for your machine, we manufacture our original fuel filters with the same care we apply to everything we build. Accept no substitute – insist on original John Deere fuel filters.

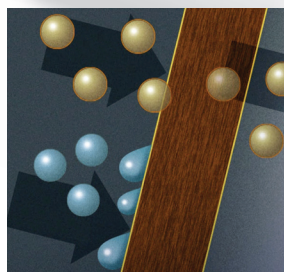

DON'T RISK IT

Thinking about risking it anyway? Watch, and you won't.

Non-Coated Fibres

Coated Fibres

1 | A tight seal between media and filter casing keeps dirty fuel from reaching the engine.

2 | Coated media prevents damage to fuel components by repelling water and contaminants.

3 | Tight pleats/even media spacing with a maximum surface area catches water and particles down to five microns in some applications.

4 | Metal end caps are stronger and more reliable.
